Product Description

Product Number	AM3013T	Magnification	10X ~ 50X - 200X
Warranty Period	1	Pixels	0.3M
Condition	New	Resolution	640 x 480
Packaging	Retail Box	Data Output	USB 2.0
Sensor	Enhanced Color CMOS	Video frame Rate	up to 30 frame-per-second
Illumination	built-in 8 white LED's	Save File format	BMP, JPG, AVI
LED On/Off Function	Yes	Calibration Function	Yes
Body length	4 inches / 10.2 cm	Body Diameter	1.26 inches / 3.2cm max.
Cable length	6 feet / 180 cm	Total package weight	280g +/- 20g

Product Applications

The next generation of Dino-Lite handheld digital microscopes has arrived. As always, researchers in the ANMO headquarters thrive to improve on its Dino-Lite digital handheld microscopes. They thrive knowing that there is always room for improvement. With the research on the AM3013T Dino-Lite Premier, they found a breakthrough. Breakthrough in improved refresh rates at 640x480 resolutions, and the ability to view and record objects more true to its natural colors. With the AM3013T Dino-Lite Premier, they have truly given birth to the next generation of Dino-Lite's.

In regards to the AM3013T refresh rate, it is noticeably faster than its predecessors. The video quality would speak for itself from the first time you run the microscope. Bright, normal, or low light situations do not bother the AM3013T. It would perform flawlessly regardless of the situation.

But that's not all. As mentioned earlier, not only the refresh rate is noticeably better but the researchers at ANMO have further improved the Dino-Lite's reproduction of color with this model. As if the color quality was not already impeccable already, images are now more vivid and truer to its natural colors right out of the box.

No other competitively priced handheld digital microscopes can offer the quality and performance of the AM3013T Dino-Lite Premier. The Dino-Lite series of handheld digital microscopes are once again and always the true leaders in high quality, competitively priced, and versatile digital handheld microscopes.

This model is also featured with the unique MicroTouch snapshot feature. The MicroTouch (touch sensitive static sensor) feature on the handheld digital microscope gives users the option of taking a picture right from the scope itself. The MicroTouch was designed to minimize image blur while taking a picture with the microscope. Great for those moments when you need to take a picture, but having a hard time reaching the computer.
